What is Wood Plastic Composite (WPC)?

WPC is a hybrid material that combines the best of both worlds: the natural look of wood and the high-tech durability of plastic.

In the world of outdoor decking, it has become the go-to alternative to traditional timber because it doesn't rot, warp, or require constant staining.

WPC Components

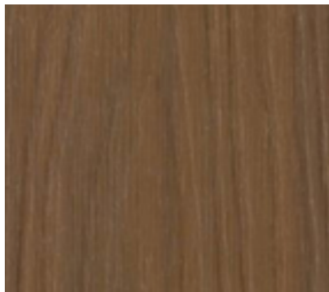

Product Colour

Explore our exclusive collection of dual-sided finishes designed to complement any architectural style.

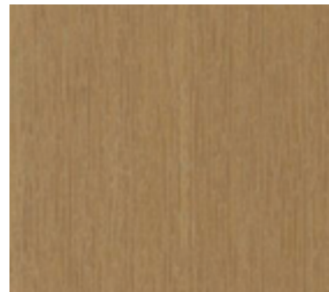

Take a look through the textures below and pick your favorite color to bring your vision to life.

Teak (Front)
